DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 11 and 21-30, drawn to the originally presented invention including writing to one Flash bank while simultaneously reading from a second *one* of the Flash banks, classified in class 711, subclass 150.
 - II. Claims 1-10 and 12-20, drawn to writing to one flash bank while simultaneously reading from at least *two* other Flash banks, classified in class 711, subclass 150.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not need more than two banks (as in the previously cited system of Chen et al., U.S. 5,867,430). The subcombination has separate utility such as the ability to perform a burst read.

3. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
